

# Rapid Quotation Pricing in Superyacht Tendering

How to calculate with CostFact in a few steps  
a reliable price indication for a new construction project

- Limit the calculation efforts to the differences from the reference vessel and get in-depth insight into the variations.
- Contrast technical parameters of reference and current project and display the parameters which exceed a defined relation.
- Run automatic plausibility checks of the parameters which are used for cost prediction.
- Make use of a software that is more than 10 years on the market and applied by yacht builders like Azimut Yachts, Nobiskrug, Lürssen and Ferretti.

<sup>1)</sup> Parameters: Main dimensions like GT, LoA, Installed Power as well as specifications like teak deck area  
<sup>2)</sup> Cost escalation: Cost class specific indexation of prices and utilization of applicable labour rates
